Building Quality into Multi-Speed IT for Digital Transformation Success

written by Manoj Khanna | October 1, 2016

The lines between Quality Engineering and Quality Assurance and the various speeds in IT should overlap

The next-generation business technology solutions need a shorter time-to-market, are increasingly customized, and are created and delivered in ever-accelerating cycles using agile methods. This is why Multi-Speed IT makes sense and why our focus should be building quality into the process right from the start.
